

REMARKS

As per the Examiner's instruction, replacement Figs. 1-6 are submitted with this Amendment. The legend "Prior Art" has been added to Figs. 1-6.

Claims 1-18 were rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Apparently the Examiner, who is a Primary Examiner, does not understand the terms "first," "second" and "third," etc. In an effort to assist the Examiner in understanding the claims, the Examiner's attention is directed to claim 1. In line 3, a vertically disposed socket may be the socket 38 or the socket 302. The first upstanding socket insert sleeve may be the sleeve 202 or 308. The first support described in line 5 of claim 1 may be the support 206 or 206". The second support described in line 7 of claim 1 may be the plate 208, 208' or 208". The first hollow tubular member described in line 9 of claim 1 may be the tubular member 214, 214' or 214". The second tubular member described in line 11 of claim 1 may be the tubular member 222, 222' or 222". The third support described in line 13 of claim 1 may be the support 224, 224' or 224". The term "retainer" in line 15 of claim 1 is being amended to be a "pin."

With respect to the fourth support described in claim 7, that support may be the plate 218, 218' or 218".

With respect to claim 12, the first upstanding support described in line 4 is the element 226 seen in Fig. 8 while the first hollow sleeve described in line 6 of claim 12 is the member 232. The second generally vertically disposed support described in line

1 8 of claim 12 is the support 208'. The first hollow tubular member described in the first
line of page 17 is the tubular member 214' while the second tubular member is 222'.
The third support described in claim 12 is the element 224'. The term "retainer" in line
16 of claim 12 has been changed to "pin."

5 It is hopeful that with this description, the Examiner may read the elements of
the claims on the drawings.

The Examiner also questioned the use of the term "quadrilateral" as used in
claims 4, 5 and 16 while the specification only uses the terminology "square."
10 Obviously, the Examiner has overlooked the fact that the original claims form a part of
the disclosure. The term "quadrilateral" would include square tubes, rectangular
tubes, etc. If required, applicant will amend the specification to describe that the
terminology "quadrilateral" includes square and rectangular members.

15 Claims 1-10 were rejected under 35 U.S.C. § 103(a) as being unpatentable
over Graham et al. (6,568,237) in view of Wisner (5,054,307).

It is respectfully submitted that the devices of Wisner and Graham are
completely different than that disclosed and claimed by applicant. The devices of
Graham and Wisner are clamping devices rather than holding devices. In the
20 straightening of frames, applicant's device holds or blocks the frame so that the frame
is a free entity so it can be returned to its proper straight position. Applicant's device is
not attached to the frame by clamping, as in the prior art, but simply holds or blocks
the frame. The prior art devices stop the frame from going back naturally during the
straightening process since the devices are clamped onto the frame rather than
25

1 holding or blocking the frame. The prior art devices are only used in the middle of the
frame while applicant's device can be used at any location with respect to the frame
and will work on all vehicles. It is therefore submitted that claims 1-10 distinguish the
prior art since they merely describe that the vehicle frame is received therein and do
5 not describe that the frame is clamped therein. Accordingly, claims 1-10 should be
allowed.

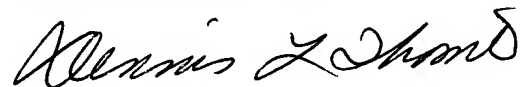

Claims 11-13, 16 and 17 were rejected under 35 U.S.C. § 103(a) as being
unpatentable over Graham et al. (6,568,237) in view of Wisner (5,054,307) and further
10 in view of Lee (5,413,303). The Examiner believes that Graham discloses a vehicle
holding system. More properly, Graham discloses a vehicle clamping system, as
discussed above with respect to claims 1-10. The same is also true of Wisner and
Lee. Wisner and Lee are not holding or blocking devices but are clamping devices.
Therefore, applicant incorporates the remarks with respect to claims 1-10 above. It is
15 believed that claims 11-13, 16 and 17 are clearly patentable over the references of
record. Further, even if the prior art discloses the structure as suggested by the
Examiner, which applicant does not admit, there is absolutely no motivation or
suggestion in the prior art to combine the references as suggested by the Examiner.

20 Claim 14 was objected to as being dependent upon a rejected base claim, but
the Examiner indicated that the same would be allowable if rewritten in independent
form including all of the limitations of the base claim and any intervening claims and
overcoming the 35 U.S.C. § 112, second paragraph, rejection. Accordingly, claim 14
has been cancelled without prejudice and rewritten as newly submitted claim 19.

1 Accordingly, it is believed that all of the claims remaining in the application are
allowable.

No fees or extensions of time are believed to be due in connection with this
Amendment; however, please consider this a request for any extension inadvertently
5 omitted and charge any additional fees to Deposit Account No. 502093.

Respectfully submitted,
